

Marine

Â

Some of our most challenging and most rewarding projects have been in the marine construction field. Along with your typical bulkheads and pier construction, we have also constructed outfall pipes into the Atlantic Ocean and LI sound. We have built several cofferdams and small bridges. Much of this work involves installing steel sheet pilings and extensive dewatering. We own a large inventory of steel sheeting and all the equipment needed to install it. We have also done many mechanical and hydraulic dredging projects and own our own barges, cranes, and work boats. Please call to arrange a consultation on your next project.

Â

Related Equipment:

Â

-
Barges to 90â€™™ long

-
Work boats 20â€™™ to 56â€™™ tug boat

-
Barge mounted cranes service available

-
Long reach barge mounted excavator

-
Low ground pressure equipment

-
Dewatering pumps and well point systems

-
Dredging equipment

-
Pile driving equipment:
